

Alleril Capsule 8g

Ingredients: Sucrose, Food Grade gelatine Capsule Black Currant (*Ribes nigrum* L. buds), Dog Rose (*Rosa canina* L. young shoots)
Colouring: Titanium Dioxide (for the capsule).

GLUCONATED MANGANESE 5DH

Diathetic Trace elements that have a recognised action in regard to allergic typologies. Among these it hyper-reactive form has been chosen because it is dealing with the real allergic form. that of an excessive para-physiological reaction in the face of the external agent.

ALLIUM CEPA 5CH

Has an elective indication for allergic symptoms.

INTERLEUKIN-2 9CH

IL 2 is the principal growth factor for T lymphocytes, it stimulates the immune response with a modulating action. According to the Arndt-Schultz law, a stimulus at high dilution (9CH) enhances its liberation.

INTERLEUKIN-4 4CH

The IL-4 stimulates the production of TH2, the principal mediators of the allergic response, favouring, furthermore, the production of immunoglobulin E with typical symptomatic action of the allergic response. According to the Arndt-Schultz law a stimulus at low dilutions (4CH) inhibits its liberation.

BENZOQUINONE 6DH, 12DH, 30DH

Benzoquinone's action is that of entering into the Krebs cycle, favouring the production of energy beginning with oxygen and water. In this way the cell reacts freeing itself of toxins and optimising its specific action.

FORMICA RUFA (RED ANT) 6DH, 12DH, 30DH

Formica Rufa may be considered a dietetic remedy and is administered with the aim of acting on the terrain of the allergic subject and allowing the modulation of the allergic response, particularly in synergy with immune stimuli produced with the use of interleukins and with the quinonic stimulus.

With ALLERIL the therapist has an instrument with which both the symptoms and the causes of the allergy may be treated. The immune system matures by way of two paths: one is characterised by the response to contact with bacterial forms, which activate the TH1 lymphocytes; The other is stimulated by the reaction to parasites and viruses, which induce the production of TH2 lymphocytes; The increase in allergies in this part of this modern epoch could be, in a certain sense, traced back to a better control of bacterial pathologies with a consequent reduction in the modulating stimulus of the TH1 lymphocytes, while the TH2 lymphocytes are stimulated by both parasites and the reduction of the reactive-immune capacity, caused by the excessive frequency of vaccinations on the one hand, and by excessive pollution of the food chain the pathogenic foundation for the excessive development of the TH2 response and therefore of allergic pathologies in general. A new strategy that is now being investigated to combat allergic asthma and allergies consists in the shifting of the indicative cause away from the TH2 lymphocytes (Gretchen Vogel in SCIENCE).

Alleril Nasal Spray 15ml

Ingredients: Saline solution (qs to 100ml), Black Currant (*Ribes nigrum* L., gems), Nigella (*Nigella arvensis* L. Seeds), benzalkonium chloride 0.01%.

Usage: In the event of acute symptoms 6 sprays/day in each nostril. It may be useful to use Alleril spray in prevention, during the period of allergies, as a sort of nasal wash, a spray for nostril, morning and evening.

An extra ally is Alleril nasal spray with *Ribes nigrum* and *Nigella arvensis*

Nigella is a plant able to balance the hyper immune response by stabilizing mast cell and normalizing the degranulation of mast cells.

Useful to give relief in case of allergic rhinitis, pollinosis, allergic coryza, stuffy nose, paroxysmal sneezing.

EUPHRASIA 10-30DH reduces high fever and relief in case of irritating secretion tear.

HISTAMINIUM 15-30DH useful in cases of rhinitis and conjunctivitis with swollen eyelids and painful dryness of nostrils.

POLLENS 30DH used in the prevention of allergic crisis, contains numerous pollen. Excellent against high fever.

SABADILLA 15DH useful in case of vasomotor rhinitis by pollinosis with constant sneezing.

SAMBUCUS 10-18DH relieves the stuffy nose.

ALLIUM CEPA 9CH facilitate the improvement of rhinitis with watery runny nose and stinging.

LUFFA OPERCULATA 6-10DH useful in allergy and inflammation of the nasal mucosa.

PULSATILLA 15DH relieves rhinitis with yellowish secretion.

AMMONIUM CARB. 110-15DH promotes a feeling of wellbeing in the event of nose closed.

APIS 9CH indicated for itching and edematous mucosa.

Mouth Ulcer treatment

After Plus Mouth Ulcers
8 patches

These slow dissolving buccal film patches have active properties that help to heal (recurrent) mouth ulcers and oral irritations. Apply the ultra thin, dissolvable patches to the affected area and the disc immediately forms a protective layer over the mouth ulcer while pain is relieved instantly. The After Plus patches are easy and hygienic to apply, stay firmly in place and slowly dissolve after hours. This revolutionary product is a breakthrough in the treatment of mouth ulcers and works fast, easy and effective.

Technology:

The After Plus patch is based on the latest innovation in the pharmaceutical industry, the dissolving film technology. Sylphar has succeeded in charging this mucoadhesive film in a unique manner. The ingredient of the patch will be released slowly and sustained onto the affected area. Furthermore, the physical properties of the film will create a strong physical barrier between the ulcerated area and the oral cavity. This will isolate the mouth ulcer and will prevent painful stimuli (e.g. cold drinks, tongue food,...) to reach the affected tissues. This technology provides strong, fast, accurate dosing and increased patient compliance.
